

MATHS/SCIENCE enrolment information 2018

Maths Methods 3C

Although now level 3, Maths Methods 3C is not sufficient as a prerequisite for further study in Mathematics at UTAS, nor for many courses interstate, however, it will still contribute to a student's ATAR.

In the **2018 Undergraduate UTAS Course book**, any reference to Maths Methods 3 means Maths Methods 3 from or prior to 2016, or Maths Methods 4 from 2017 onwards.

Any reference to Maths Applied is Maths General 3.

Engineering

Most Engineering courses at UTAS state prerequisites as being Physical Sciences 3, and Maths Methods (4), however, to ensure success in the course it is strongly recommended that students should also have studied Physics 4 and Maths Specialised 4.

Maths Specialised 4

Maths Specialised 4 and Maths Methods 4 can be studied concurrently if required.

Science

Students enrolling in Physical Sciences 3, should be planning to have a pre-tertiary maths by the end of year 12.

Physical Sciences needs to have been passed prior to study of Chemistry 4 or Physics 4.

Chemistry 4 or Physics 4, and Physical Sciences 3 can be studied concurrently in Year 12 if required.
